The currency structure of external debt shows major participation of EUR, SDR<sup>13</sup> and USD in the currency structure of the contracted external debt, as well as in the currency structure and the state of external debt. Out of total contracted credits, 90.98 per cent pertains to the stated currencies, while the same currencies represent 91.69 per cent of debt.

When it comes to the currency structure of serviced BiH external debt in the observed period, 76.06 per cent of obligations was paid in EUR, 18.51 per cent in USD, while 5.43 per cent is implemented in other currencies (toward some countries from the Paris Club of creditors or under credits from bilateral agreements). Out of the total amount of obligations paid in EUR 20.35 per cent is represented by obligations serviced to IMF, since the obligations calculated in SDR are paid in EUR.

<sup>13</sup> SDR (*Special Drawing Rights*)-calculation unit used by IMF, World Bank and several other international institutions. SDR is comprised “a basket of currencies” (USD 41.73 per cent, EUR 30.93 per cent, CNY 10.92 per cent, JPY 8.33 per cent and GBP 8.09 per cent).

### 1.7. Indicators of external debt susceptibility to other risks

In addition to the level of indebtedness, debt structure represents one of the reasons behind financial crisis and instability. Therefore, the external debt portfolio should be analysed through its exposure to risks. It can be said that one of the purposes of BiH external debt structure analysis is to identify the exposure of the current external debt portfolio to currency risk, interest rate risk and refinancing risk. Parameters of BiH external debt exposure to the stated risks are represented in the following table.

Table 6 BiH external debt risk indicators in 2018 and 2019

Risk indicators		2018.	2019.
Interest rate risk	Fixed interest rate (%)	59.65	68.01
	Variable interest rate (%)	40.35	31.99
	Debt re-fixed within one year (% of total)	43.98	36.34
	Average re-fixing period (years)	4.43	5.11
Refinancing risk	Average maturity (years)	7.29	7.16
	Debt maturing within one year (% of total)	8.01	7.52
	Average grace period (years)	6.62	6.61
Currency risk	Non-EUR currencies share in external debt (%)	41.41	39.79

Re-financing risk represents debt maturity structure and percentage of debt maturing in the short-term, interest rate risk, debt exposure through changes in interest rates, while the currency risk represents the degree of exposure of the total debt structure to changes in exchange rates of currencies included in the debt portfolio.

Re-fixing the external debt takes 5.11 years, on average. External debt re-fixed within one year represents 36.34 per cent of the total external debt portfolio, as the result of the fact that 31.99 per cent of external debt portfolio is contracted with a variable interest rate. Despite the decrease in the interest rate exposure risk in 2019, i.e. indicators related to the interest rate risk have improved; external debt is still exposed to the **interest rate risk**. With the aim of further decrease of exposure to this risk, borrowing under fixed interest rate is preferred, with taking into account the relation between the cost and the risk, since the cost of variable interest rate is currently significantly lower than the cost of the fixed interest rate.

**Re-financing risk** indicators in 2019 are lower than compared with the previous year. The average maturity in 2019 is 7.16 years and is slightly improved in comparison with the previous year when it was 7.2 years, and the indicator related to the participation of debt maturing within the following year is 7.52 per cent. The grace period of the debt as of 31 December 2019 is 6.61 years and remains on the approximately same level as in 2018.

Taking into account the currency board arrangement implemented by the Central Bank of Bosnia and Herzegovina, i.e. BAM co-relating with EUR, 39.79 per cent of external debt is susceptible to exchange rate fluctuations, i.e. to **currency risk**. In 2019, participation of non-EUR currencies in the external debt was lowered when compared with 2018. Therefore, exposure to the currency risk has decreased. Further decrease of the currency risk is possible through increase of debt in EUR in comparison with other foreign currencies.

### *1.8. Overview of projects in the procedure of conclusion*

The stated projects are planned to be financed mainly from multilateral sources, i.e. 94.89 per cent pertaining mainly to EBRD, the World Bank and EBRD, while 5.11 per cent are planned to be financed from bilateral sources.

Of the total value of projects planned for credit financing from external sources, 91.24 per cent pertains to infrastructure projects, 7.58 per cent for public sector projects and 1.18 per cent to economic activity projects. In the currency structure of external credits planned to be used for financing projects in the procedure of conclusion, EUR makes for 93.10 per cent.

### 3. GUARANTEES FOR EXTERNAL AND DOMESTIC DEBT OF BOSNIA AND HERZEGOVINA

#### 3.1. External state guarantees

Bearing in mind the fact that issued state guarantees do not represent the debt of Bosnia and Herzegovina or Entities, but a potential debt to be paid in case failure by the end-user to repay the credit, the same are not included in the total public debt.

The Law on Borrowing, Debt and Guarantees of BiH (Chapter IV of the Law) defines, *inter alia*, the purpose of issuing a state guarantee, under which BiH may issue a guarantee for the purpose of financing capital investments or implementation of a priority project of significance for the economic stability of the country.

In the previous period, the matured obligations under issued external state guarantees were timely repaid by the end-users.
